Drawings

Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Loyer (US 6,642,742 B1).

Regarding claim 1, Loyer discloses, in Figs. 1 and 2, a driver circuit comprising:

Art Unit: 2819

a plurality of parallel resistors (12, 13), wherein a total impedance of all said resistors equals an impedance of an associated transmission line (col. 3, lines 15+, lines 30+); and

a switch (121, 131) adapted to combine said resistors to control an output level of said driver.

Regarding claim 2, Loyer discloses, in Figs. 1 and 2, that said switch selectively connects said resistors to either a voltage high signal (V) or a voltage low signal (GND).

Regarding claim 3, Loyer discloses, in Figs. 1 and 2, that a first set of said switches connect a voltage high signal to a first resistor (12A) of said resistors and a second set of switches connect a voltage low signal to a second resistor (13A) of said resistors.

Regarding claim 4, Loyer discloses, in Figs. 1 and 2, that said switch comprises a matched pair of opposite type transistors (col. 4, lines 60+).

Regarding claim 5, Loyer discloses, in Figs. 1 and 2, balancing resistors connected to said switch, wherein said balancing resistors are sized to balance the resistance within said driver circuit (col. 6, lines 59+).

Regarding claim 6, Loyer discloses, in Figs. 1 and 2, that said resistors are said balancing resistors (col. 6, lines 59+).

Regarding claim 7, Loyer discloses, in Figs. 1 and 2, drivers connected to said switches (col. 3, lines 5+).

Claims 8-20 are similarly rejected as claims 1-7 as discussed above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2819

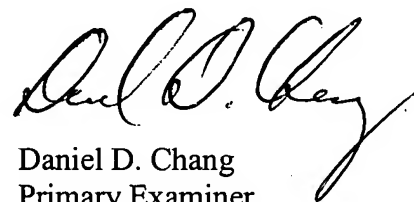

Thompson et al (US 6,545,560 B1) discloses a method to find a value within a range using weighted subranges.

Gabara (US 6,326,821 B1) discloses a linearly controlled resistive element apparatus.
